

# A new screened exchange hybrid functional: Accurate and efficient structures and interaction energies

**Gerit Brandenburg** <g.brandenburg@ucl.ac.uk> | 2016-09-27

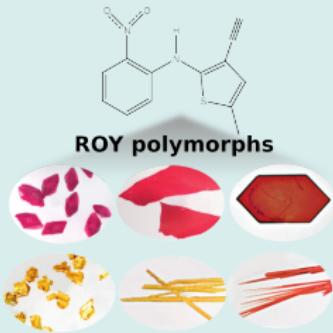

STC2016 - 52<sup>ND</sup> SYMPOSIUM ON THEORETICAL CHEMISTRY - BOCHUM, GER

# Outline of talk

- 1 Introduction and motivation
- 2 Design principles of HSE-3c
- 3 Application of HSE-3c to thermal expansion
- 4 Conclusions

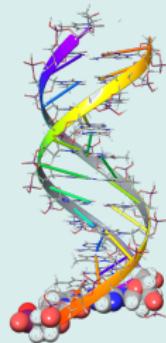

# Large (periodic) systems with small energy gap are of interest

Physico-chemical properties depend on crystal packing?

- color indicates band gap  
~ 2 eV – 2.5 eV
- available methods are either inaccurate or unfeasible

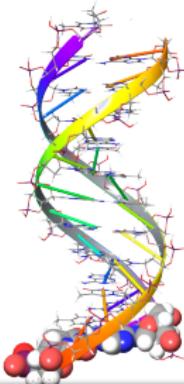

How to compute the electronic structure of biological mol.?

- large structures, typically in solution, small gaps by GGAs
- need for an accuracy semi-empirical methods cannot provide

# New density functional for cost-efficient electronic structure computation

	tight-binding	GGA	global hybrid
accuracy	✗	✗	✓
reduced SIE [1,2]	✗	✗	✓
num. robust	✓	✓	✗
comp. feasible	✓	✓	✗

→ need for an efficient and robust hybrid density functional

# Three ingredients target different interaction regimes

## HSE-3c contributions<sup>[3]</sup>

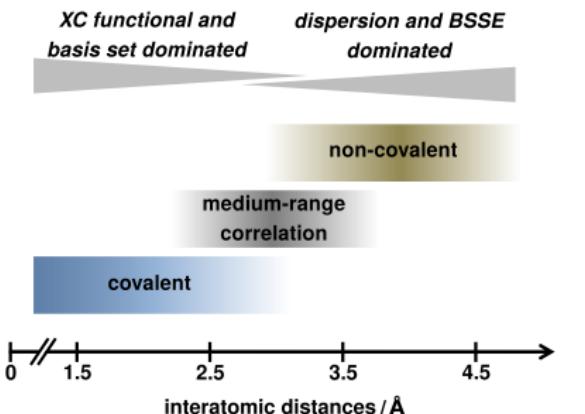

$$E_{\text{tot}}^{\text{HSE-3c}} = E_{\text{xc}}^{(\text{modHSE})} + E_{\text{DISP}}^{(\text{D3})} + E_{\text{BSSE}}^{\text{gCP}}$$

(A) DFA/basis set

mod. HSE<sup>[4]</sup> / def2-mSVP<sup>[5]</sup>

(B) London DISP interaction

(C) BSSE counterpoise correction

$$E_{\text{xc}}^{(\text{modHSE})} = \mathbf{0.42} E_x^{(\text{HF,SR})}(\omega = \mathbf{0.11}) + 0.58 E_x^{(\text{HSE,SR})}(\omega) + E_x^{(\text{HSE,LR})}(\omega) + E_{\text{c}}^{(\text{modPBE})}$$

# Substantial speed up due to efficient basis set and screened exchange

## Series of oligoacene crystals

- substantial speedup due to small basis set
- short-range Fock exchange reduces SIE
- numerically robust at small band gaps

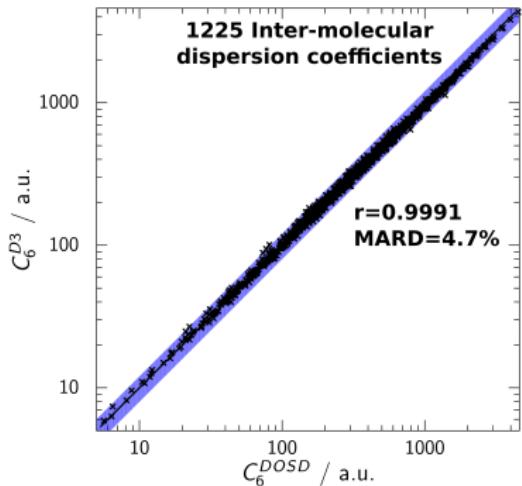

→ exploit rotational-translational symmetry within CRYSTAL<sup>[6,7]</sup>

# Semi-classical correction yields highly accurate dispersion coefficients

## D3 correction<sup>[8-10]</sup>

$$C_6^{\alpha\beta} = -\frac{3}{\pi} \int_0^{\infty} \alpha^{\alpha}(i\omega) \alpha^{\beta}(i\omega) d\omega$$

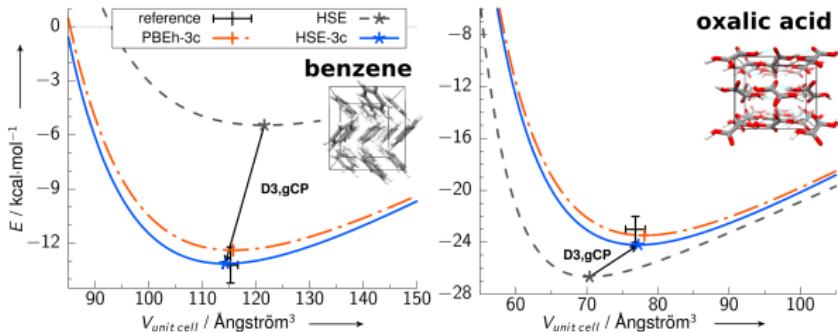

- Casimir-Polder integration of TD-DFT excitations on model hydrides
- residual long-range error < 5%

# Description of simple organic crystals close to reference accuracy

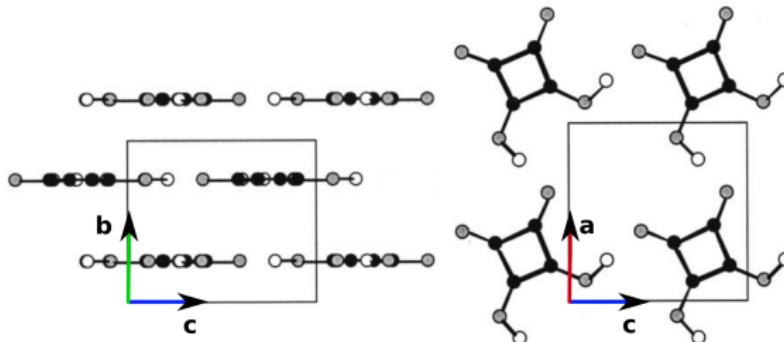

- thermal corrections needed for equilibrium structure and lattice energy<sup>[11]</sup>
- error compensation between missing dispersion and BSSE is not reliable
- identified by Computational Chemistry Highlights:  
“Most striking is the roughly ‘MP2-quality’ (...) obtained for non-covalent complexes and equilibrium structures (...) for medium-sized organic molecules.”

# Squaric acid: simple crystal with interesting properties

## Experimental interest

- dibutylester has medical applications in skin treatments<sup>[12]</sup>
- reagent for chemical synthesis

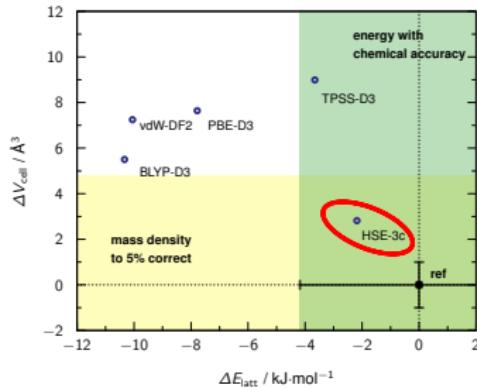

## Theoretical challenge

- strong hydrogen bonds within and vdW stacking between layers
- phase transition from antiferro- to paraelectric<sup>[13]</sup>

[12] A. M. Holzer, W. R. Kaplan, *J. Drugs. Dermatol.*, **5**, 410 (2006)

# Hybrid functional needed for accurate description

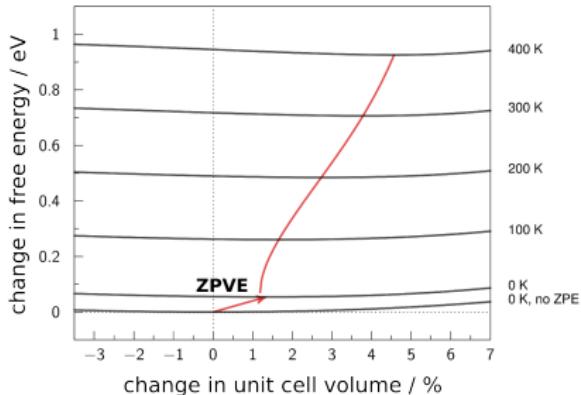

- GGAs are problematic, independent of dispersion correction
- HSE-3c provides both excellent energies and geometries
- low-temperature neutron scattering and sublimation measurements used for comparison

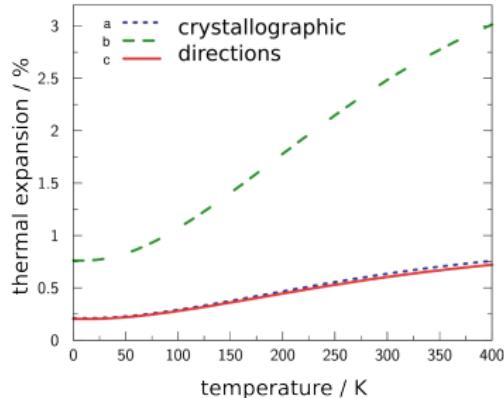

→ HSE-3c phonon modes with dense Brillouin zone sampling for quasi-harmonic treatment feasible

# Quasi-harmonic treatment reveals strong anisotropic expansion

Vinet equation of state

Anisotropic expansion

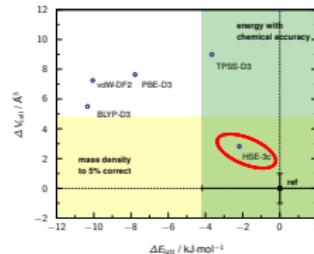

- substantial zero-point effect on unit cell
- predicted expansion in good agreement with new temperature dependent neutron scattering measurements<sup>[14]</sup>

[14] in preparation

# Summary

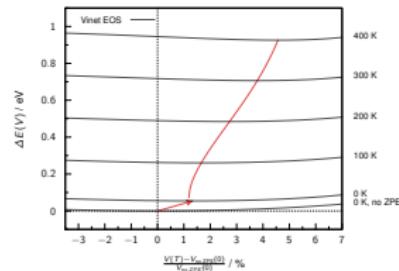

## Conclusions

- cost-efficient method for routine electronic structure calculations needed
- HSE-3c is a promising new composite scheme
- quasi-harmonic treatment captures anisotropic thermal expansion

## Outlook and possible improvements

- methods will be available in CRYSTAL17
- apply HSE-3c in the crystal structure prediction framework
